

## GinShiCel MH608-S-D

### Technical Data Sheet

Product description	It is a high viscosity grade hydroxypropyl methyl cellulose ether, which can be dissolved in water to form a transparent solution. It is widely used in daily chemical fields such as shower gel, shampoo and toothpaste.
Performance	It has obvious thickening effect, good acid and alkali resistance, salt resistance, jelly formation resistance and high comprehensive cost performance. Excellent water retention and moisturizing performance. Good lubricity Better foam stability It has good compatibility with various surfactants, stable emulsification and mild solution.
Product index	Appearance: white or almost white powder Viscosity (BK,2%,20°C)/mpa·s: 240000-280000 Ash content /% : ≤5.0 Screen residue (180μm standard screen)/% : ≤8.0
Package specification	Composite woven bag lined with plastic film or kraft paper, 25kg/bag.
Storage and transportation	Storage and transportation shall be carried out in a dry environment. In case of high temperature and humidity, it is necessary to prevent moisture and pressure to avoid agglomeration or caking. If the product is not used up, the package must be tightly sealed to prevent moisture intrusion.
Quality guarantee period	It can be stored for 2 years if it meets the storage and transportation conditions. If the product exceeds the shelf life, it can be used only after passing the test and verification.

Note: All the data and suggestions provided above are our reference opinions based on our understanding of current raw materials and applied technology, Since the quality of raw materials, production process, actual construction requirements and use environment adopted by users cannot be controlled, our company does not imply any guarantee and commitment to the quality of users' end products! The user is responsible for the adjustment of the formula system and the final control of quality according to the actual situation.
